What is panorama NIPT?

Panorama is a non-invasive prenatal screening test (NIPT) performed through a simple blood test. During pregnancy, some of the DNA from the placenta which carries the baby's genetic information, crosses into the mother's bloodstream. Panorama looks at this DNA to see if there is evidence of certain genetic conditions that could affect the baby's health.

What does Panorama NIPT screen for?

Panorama screens for common genetic conditions that are caused by extra or missing chromosomes in the baby's DNA e.g Down Syndrome (trisomy 21).

What do Panorama NIPT results tell me?

Panorama gives you a personalised risk score and tells you if the baby is at high risk or low risk for the conditions it screens for. Like other screening tests, Panorama does not provide a definitive diagnosis of the condition.

Is Panorama NIPT right for me?

If you would like to know whether your baby is at risk for certain genetic conditions, Panorama may be the right option for you.
